"Who is the right homeless client?": Values in Algorithmic Homelessness Service Provision and Machine Learning Research
International Conference on Human Factors in Computing Systems
2023
No PDF
Homelessness presents a long-standing problem worldwide. Like other welfare services, homeless services have gained increased traction in Machine Learning (ML) research. Unhoused persons are vulnerable and using their data in the ML pipeline raises serious concerns about the unintended harms and consequences of prioritizing different ML values. To address this, we conducted a critical analysis of 40 research papers identified through a
